

a Strongly coupled interactions in a warehouse cycle network

b Shared reward yields ambiguous individual credit

Episode rollout — Agent A yields

Both reach goals • shared r_t rewards both

Counterfactual probe — mask A

Without A's yield → conflict, low team value

shared r_t
+1.0

$V(s_t)$
high

$V(s_t \setminus A)$
low

$\phi_A = V - V \setminus A$
